More children are getting asthma and allergies, and more seniors are suffering heat stroke. Food and utility prices are rising. People are losing jobs in drought-related factory closings. A remaking of America is likely in our lifetimes. This will transform how and where we live, work and play. USA Today

A new climate model predicts an increase in snowfall for Earth’s polar region and highest altitudes, but an overall drop in snowfall for the globe, as carbon dioxide levels rise over the next century. ScienceDaily

Ice algae have started sinking down to the seabed, altering the food web and the oxygen content of Arctic Ocean waters. Ice algae thrive underneath the sea ice and are important producers of food and oxygen. But what happens as climate change melts the ice? Deutsche Welle

A new report shows that vehicles produce more than half of greenhouse gas emission in the region. That’s one reason that Maggie Emudluk, chairperson of the Kativik Regional Government, now doesn’t leave her vehicle’s engine running. Nunatsiaqonline

Minnesota’s decision last month to end its moose-hunting season because of the animal’s rapidly declining numbers in the state has made the gangly, iconic symbol of cold northlands a new player in the debate over climate change. The moose population has dropped by 69% over the past seven years. USA Today

This two minute video documents a new study by the Minnesota Department of Natural Resources to determine why Minnesota's moose population is in decline. YouTube

Climate and Health E-News is received around the circumpolar north by people who are interested in climate change and public health. For back issues click here. To subscribe or unsubscribe, click here.
