

Alaska Climate and Health E-News
Raising Awareness about Climate Change Impacts on Public Health
No. 43, November 19, 2010

As Glaciers Melt, Science Seeks Data on Rising Seas – *New York Times* (November 13, 2010) As a result of recent calculations on Greenland and Antarctic ice sheets, many scientists now say that sea level is likely to rise three feet by 2100. [Read Story](#)

Is Climate Change to Blame for Bigger Ocean Waves? – *McClatchey* (November 14, 2010) Scientists say that coastal waves are steadily increasing in size. In the Northwest, the larger waves are considered a threat to coastal communities and beaches. [Read Story](#)

Sea Squirts Invade Sitka – *KFSK Public Radio* (November 5, 2010) State officials say an invasive species of sea squirt has been found in [Sitka](#)'s Whiting Harbor. The small tunicate [Didemnum vexillum](#), was first discovered in Alaska during a survey last June. [Read Story](#)

Alaska Climate Events Map, November Updates – *ANTHC* (November 18, 2010) [See Our Google Map](#)

The Climate and Health E-News is received around the circumpolar north by people who are interested in climate change impacts on health. If you have an observation or an update you would like to include in our Climate Events Map, please send a message to mbrubaker@anthc.org. To join the E-News mailing list, just respond to this message with your contact (e-mail/name/location) information.
